## Bill Of Materials

| Name              | Quantity | Length  | Width  | Thickness | Material       |
|-------------------|----------|---------|--------|-----------|----------------|
| End Plate         | 2        | 9"      | 6"     | 3/4"      | OSB or Plywood |
| Base              | 1        | 26"     | 9"     | 3/4"      | OSB or Plywood |
| Gusset            | 2        | 2 3/4"  | 2 3/4" | 3/4"      | OSB or Plywood |
| Dowel             | 2        | 25 7/8" | 1"     | 1"        | Hardwood       |
| Sheet Metal Screw | 4        | 1 3/4"  | 3/16"  |           | Steel          |
| Fender Washer     | 8        |         | 1" OD  | 1" OD     | Steel          |
| Non-Skid Mat      | 1        | 27 1/2" | 9"     |           | Rubber         |

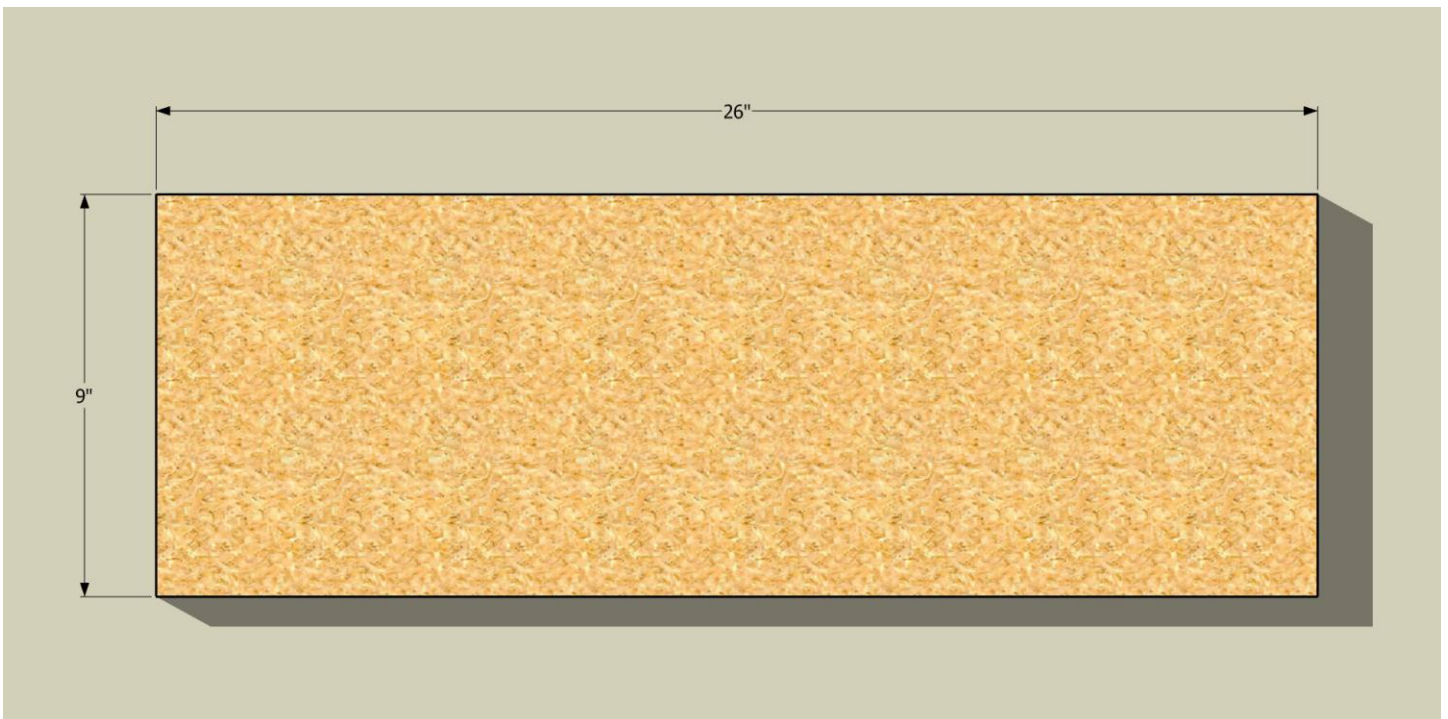

## Assembly Instructions

- Cut all wood pieces to size, sand as required.
- Glue and screw End Plates to Base.
- Attach Gusset to inside corners of End Plate and Base for stability.
- Cut dowel rods slightly shorter than space between End Plates to accommodate 2 fender washers.
- Drill pilot hole in center of each end of dowel rods for sheet metal screws.
- Holes in End Plates for Sheet Metal Screws should be the same diameter as the outer diameter of the screw threads. The screws should just spin in these holes.
- Assemble the dowels to the base as shown, with a fender washer behind the head of the screw and a second between the End Plate and Dowel.
- Tighten the screws only enough to take up slack, leaving them loose enough for the dowels to spin.
- Gluing a piece of rubber non-skid shelf liner to the bottom of the unit will help keep the dispenser from sliding across the table as you pull the tape out for application.
